PROFESSIONAL SUMMARY

Engineering executive guiding engineering teams to deliver business value out the door early and often. Deeply involved from conception to release, fostering success by example and support, employing hands-on technical and project leadership, community best practices and techniques across the applications and infrastructure stacks. My work is underlined by a belief that success comes from having a passion in what you do.

CAREER HIGHLIGHTS

- Pioneered AI-driven analytics pipelines (Claude, GPT, Gemini) to distill enterprise data into concise risk analyses and actionable recommendations, tailored to executive and management user roles.
- Secured US Patent I 1037223B1 for technical innovation while at Stamps.com, contributing to the company's IP portfolio.
- Led the launch of DYMO Stamps Online®, a cloud-native solution praised by PC Mag for its intuitive user experience.
- Architected and led development of VeraScore's flagship financial scoring platform to MVP in six months.
- Spearheaded Project Phoenix at EQIS Capital, resulting in a 72% reduction in AWS infrastructure costs.
- Mentored student engineering teams from Worcester Polytechnic University (WPI) to consecutive "best project" wins.
- Built an international career spanning Europe (UK), SE Asia (Singapore), USA (Silicon Valley).

EMPLOYMENT HISTORY

APRIL 2025 - Present

VP Engineering, Nularity AI, San Francisco, CA | <https://nularity.ai>

Stealth-mode platform that extracts decision-grade insights from enterprise data.

- Co-founded the engineering org; delivered demo-ready MVP on AWS in 2 months.
- Designed multi-model LLM gateway (Claude 3, GPT-4 Turbo, Gemini 2.5).
- Designed Frontend AND Built IaC/CDK stack (Vite + React, DynamoDB, Cognito, CloudFront, CICD Pipelines) enabling daily prod deploys by week 8.

JUN 2022 – APRIL 2025

VP Engineering, VeraScore™, San Francisco, CA | <https://myverascore.com>

Mission-driven fintech improving credit access for underserved consumers.

- Directed the end-to-end design and implementation of VeraScore's flagship platform, from MVP to production in six months, balancing rapid iteration with long-term architectural resilience.
- Launched JAMStack architecture on <\$1k/month infra, sustaining >99.95% uptime.
- Worked closely with Product, Design, Legal, and Business stakeholders to ensure engineering efforts directly supported mission-critical goals, user engagement, and ethical data practices.

AUG 2017 - NOV 2022

VP Engineering, EQIS Capital, San Francisco, CA | <https://freedomadvisors.com>

Digital wealth-management platform (acquired 2023).

- Managed team of nine engineers. Five full-stack application engineers (C#, JavaScript, SQL), one DBA (MS SQL Server) and two AWS infrastructure and Operations engineers who implemented instrumentation to monitor production systems and manage CICD pipelines.
- Drove infrastructure transformation —costs were \$33k/month when I arrived, <10k/month one year later.
- Led development of new generation of asset management portfolio generation used by Financial Advisors to allocate assets based on personal risk tolerance and investing strategy – a complete rewrite including overhaul design, underlying backend processing and storage.

JUN 2010 - AUG 2017

Principal Engineer, Stamps.com, Mountain View, CA | <https://stamps.com>

E-commerce shipping and mailing solutions.

- Spearheaded the launch of DYMO Stamps Online®, a cloud-native solution praised by PC Mag for its intuitive user experience and accessibility in the small business and home office market.
- Architected and led the development of the GlobalPost system, significantly improving international shipping.
- Delivered solutions with a strong focus on usability, performance, and service quality—helping to shape a suite of tools trusted by millions for seamless, compliant postal transactions.

MA Computer Science, Sussex Uni, UK BA Film & Tv, Derby Uni (Hons 2:1), UK PGCert Higher Education, Cardiff, UK
